

*A New Idea Comes Home*

*They're here! They've already revolutionized science and industry. They handle thousands of complex operations at lightning speeds. What are they? Computers! Now you can enjoy this same miracle technology in your home with an Interact personal computer. Interact computers are very much like their commercial counterparts in speed and basic capabilities. But unlike commercial systems, Interact computers have been carefully designed for you, your family and your home. The compact, portable console connects to your home TV and plugs into a standard wall outlet. Interact's large library of cassette tapes that load at the touch of a button contain colorful programs designed to meet the entertainment, education and home management needs of you and your family. And, unlike commercial systems, Interact computer systems and programs are priced for the home — they're surprisingly affordable.*

## Interact Is for Now...

**Family Entertainment.** Today more and more families are rediscovering the rewards of at-home activities that bring family, friends and neighbors together. With an Interact computer and your color TV your family and friends will enjoy hours of exciting games in full, vibrant color, highlighted with amusing sound effects:

### *For the Family*

Action-packed, full-color video games like SHOWDOWN™ and TRAILBLAZERS™ provide hours of side-splitting fun. Or play "games" like TOUCHDOWN and ADD 'EM UP™ with your children to strengthen their skills in spelling, vocabulary, arithmetic, music, motor skills, memory retention and more!

### *For the Kids*

Alone against the computer or together with a friend, your child has fun and widens his horizons with unique programs like MUSIC MAESTRO™ and COMPUTE-A-COLOR™. The Interact uses a format familiar to your children — your TV — yet their interactive computer "play" will help them grow more than any passive TV viewing ever could.

### *For Older Children and Adults*

Your Interact computer challenges your mind with interesting, thought-provoking simulation and strategy games like chess, backgammon, STAR TRACK™ and HAMMURABI. Or use the BASIC programming language to create your own colorful games!

**Home Management.** Now more than ever it is vital for you to know how much money you have, and to spend it wisely.

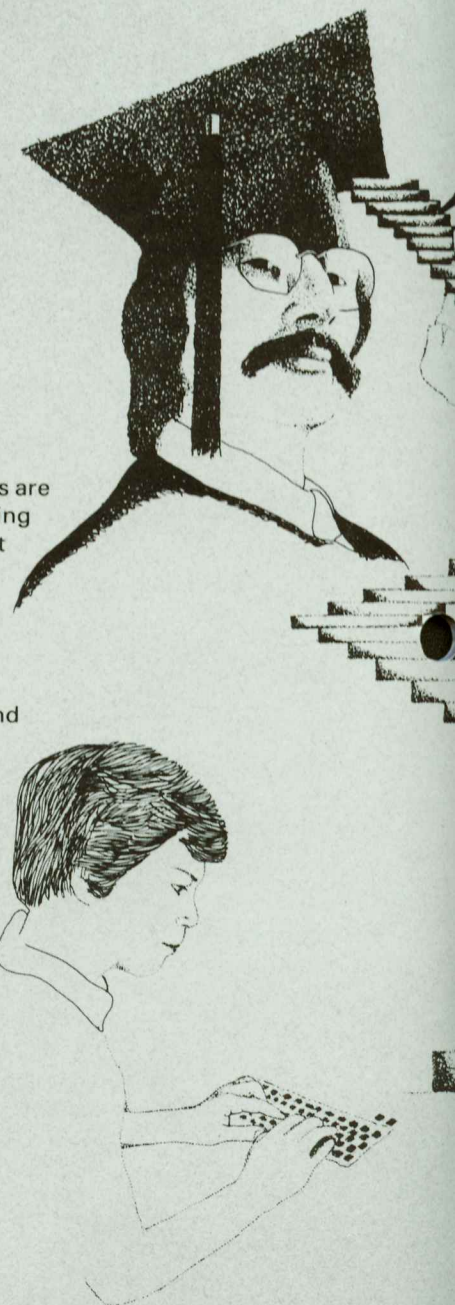

Interact Management Series program tapes can help. They're professionally designed, easy to use, and come with instructions written in plain, non-technical language:

### *Keeping Track*

Programs like CHECKBOOK BALANCER, NET WORTH and BUDGETING help you keep your records accurate and up-to-date.

### *Investing Wisely*

Professional-quality programs like PORTFOLIO REPORTER, TRENDS and LOANS — used in the privacy of your own home — provide the information you need to help you make sound investment decisions.

# Interact Is for the Future...

Interact's immediate uses are many and rewarding. Yet the future of this incredibly versatile machine is virtually unlimited:

## *For the Kids*

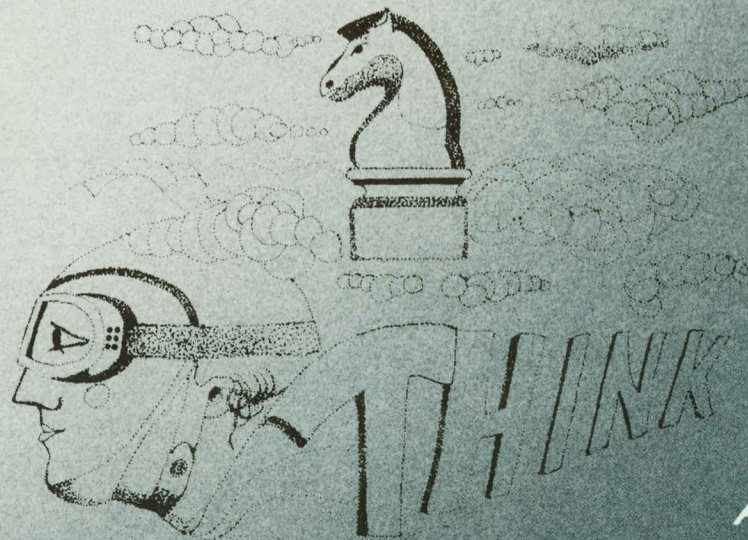

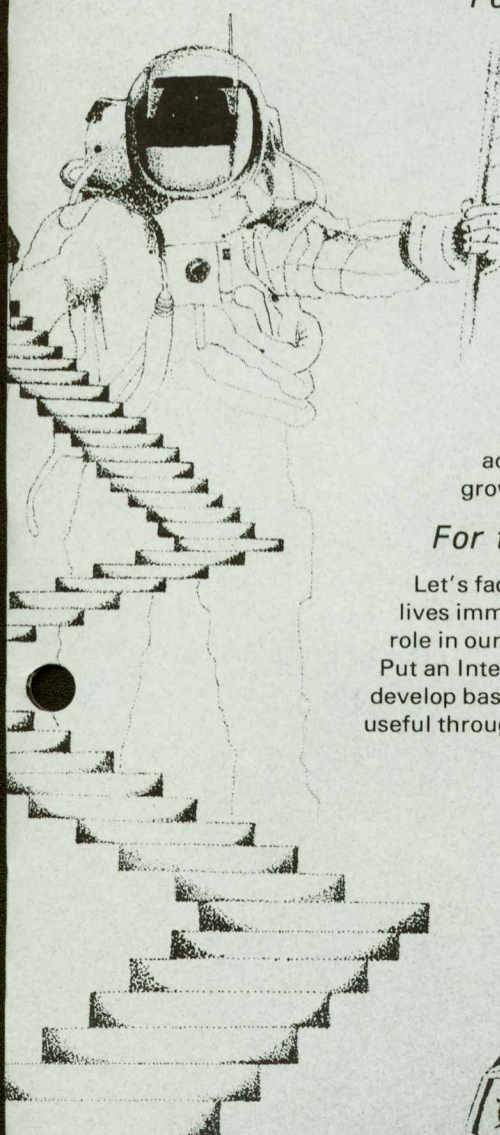

Interact program tapes like THINKCARDS — and the ability to create your own special programs — make your Interact computer a unique, valuable learning tool for your kids, from preschool right up through college and beyond. It can help with everything from mathematics to languages to history. In fact, your children's experience with the Interact may even help them get into the college of their choice.

## *For You*

Interact's already-large library of pre-programmed tapes is growing every day, providing ever more uses for your Interact computer. And, since it's programmable, you can develop your own custom programs whenever you discover new areas where a computer can help. And, unlike systems from some manufacturers, you can start with the basic standard system, adding capabilities and attachments as your expertise and needs grow — without buying a whole new computer.

## *For the Family*

Let's face it — computers are here to stay. They affect our daily lives immeasurably now, and they're sure to play an even larger role in our future. Make your move to prepare for that future. Put an Interact computer in your home and the whole family will develop basic computer skills and understanding that will prove useful throughout your lives.

**SURPRISINGLY  
AFFORDABLE**

Computers with the same basic capability and size as your Interact used to cost thousands of dollars. Yet you can own an Interact personal computer today for as little as \$499.95. Program tapes are also inexpensive, starting as low as \$8.95. Compare these costs with what you probably spend for stereos, TVs, records, tapes and other "electronic entertainment" devices. Compare them with what you spend on lessons, tutors, tuition and so on. Think of the value you receive — a state-of-the-art, quality device that provides not only entertainment and education for the entire family, but also personal management aids and more. And you can program your machine to create systems precisely tailored to meet your needs now and later on. Compare. We think you'll agree that an Interact computer is a wise, practical purchase.

**WHICH ONE IS FOR YOU?** Whichever Interact system you select, you get these important benefits:

**PRICE** — No one sells a complete computer system with all the Interact features for less than Interact's low, low price of \$499.95. In fact, many computers costing \$100's more don't provide many significant Interact features.

**PROGRAMS** — Already Interact offers over 30 professionally-designed, colorful pre-programmed cassettes. And we're designing more every day. Even if you never write a single program for your Interact, you'll find many uses for your computer.

**APPEAL** — Interact gives you hundreds of fabulous color combinations to please your eye. Hundreds of amusing sound effects to tickle your fancy. Octaves of pure musical tones to delight your ear.

**RELIABILITY** — Interact computers are fully shielded, modularly constructed and self-diagnosing. These features, along with our rigid factory quality control, mean maximum reliability and low repair costs if something does go wrong.

**NON-INTERFERENCE** — Your Interact will not interfere with the operation of nearby TVs and radios as many other personal computers do. So you can use your Interact without disturbing the activities of neighbors and other family members.

**WARRANTY** — You get a longer warranty with your Interact than with most other personal computers — 90 days on labor and a full year on parts. With each add-on, you'll get a new 90-day parts and labor warranty on the whole system. We'll even send you a free tape worth at least \$8.95 when you mail us your warranty card.
